

MIKHAIL BIN YASSIN

Aspiring Data Engineer with a strong academic foundation in Data Engineering from Universiti Teknologi Malaysia. Skilled in developing ETL pipelines, database systems, and creating data-driven applications using Python. Data Engineering Intern for 9 Months at U Mobile DSCVM Department and completed a custom pipeline orchestration as my Final-Year Project called "Design & Implementation of a DAG-based ETL Scheduling System". Interested in How Data, Software and AI will change in the new paradigm of LLM-emergence.

EDUCATION

Universiti Teknologi Malaysia, Johor Bahru Oct 2021 - Oct 2026
Bachelor of Computer Science (Data Engineering), CGPA - 3.85

Universiti Institusi Teknologi MARA, Dengkil July 2020 - May 2021
Foundation in Engineering, CGPA - 4.00

CERTIFICATES

- AWS Academy Data Engineering
- AWS Academy Cloud Architecting
- AWS Academy Cloud Foundation
- Google AI Professional
- Microsoft Certified: Azure Data Fundamentals

SKILL AND INTEREST

Technical Skills : SQL, Python/PySpark, PostgreSQL, ClickHouse, Bash/Shell, Linux, Git, OpenTelemetry
ETL development, Big data processing, Database design, Workflow orchestration, Data analysis & reporting, Web Application development

Interest : Data Engineering, Real-time Data Processing, Agentic Engineering, System Design and Cloud System

Languages : Malay (Native), English (Proficient)

EXPERIENCE

U Mobile - Data Science & Campaign Value Management - Data Engineering Intern (9 Months) 11 Nov 25 - 18 Aug 26

- Designed, developed, and deployed PySpark/Python ETL pipelines for billing, activation, and reconciliation reporting on on-premise big data platforms, from requirement gathering through UAT to production
- Processed large-scale CDR datasets of ~2 billion rows daily using PySpark to prepare curated datasets for a cloud DaaS POC with an external vendor
- Performed in-depth data analysis on inter-operator billing discrepancies and settlement reports and identifying root causes.
- Improved automated operational workflows including secure cloud file transfers, variance alert emails, and file permission management; building a centralized platform monitoring dashboard POC using ClickStack
- Supported legacy platform migration, server operations, and internal knowledge-sharing sessions
- Skills gained: PySpark, Python, SQL, Bash, Linux, AWS, ClickStack, ETL design, workflow orchestration and system design

UNIVERSITY PROJECT

Full Stack Web application development for Intellect Playschool, Pulau Mutiara, Johor Bahru

- Led a team of 4 during our Work-based Learning semester to develop a web application for a kindergarten in Pulau Mutiara
- Project was guided and assessed by university lecturers
- Chosen as the Best Group for our first Work-based Learning(WBL) semester

Full Stack Web application development for an Autism School, Johor Bahru

- Led a team of 4 during my second Work-Based Learning semester to build a web application for a local autism education center
- Project was overseen by Mr. Syukry Radzi, CEO of Cloudswired Technologies
- Chosen as the Best Group for our second Work-based Learning(WBL) semester

ACTIVITIES

Faculty of Computing Research & Innovation Day (FCRI 2025) - Showcase Planning Team Lead June 2025

- Led a team of 5 to handle communications with Finexus Group Sdn. Bhd. for a possible product showcase booth at FCRI 2025

Sukan Fakulti Komputeran 2023 (SUSKOM' 23) - Multimedia Team Lead Dec 2023

- Led a team of 5 to manage multimedia content and event coverage

Kolej Tun Dr Ismail Earth Day 2023 - Multimedia Team Lead Apr 2023

- Supervised a 5-person team to deliver promotional multimedia materials for Earth Day events
